the combination that has not been found, taught or suggested by the prior art of record, which makes this/these claim(s) allowable over the prior art.

The primary reason for the allowance of claim 7 is the inclusion of: a processing circuit coupled to receive commodity consumption information from the source of commodity consumption information, the processing circuit configured to generate metering data based on the commodity consumption information and real time clock information, and adjust the real time clock information in dependence upon the output signal from the at least one sensor. It is this/these features found in the claim(s), as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this/these claim(s) allowable over the prior art.

The primary reason for the allowance of claim 19 is the inclusion of the method steps of: adjusting at least one clock maintained by the time keeping function of the meter in dependence upon the output signal.
